Profile

Front-End AI Developer

Versatile developer skilled in creating responsive and user-friendly web interfaces using HTML, CSS, JavaScript, and modern frameworks like Bootstrap while also developing AI and machine learning applications in Python. Experienced in building interactive web applications, image/text analysis, and deploying solutions using libraries like NumPy, pandas, TensorFlow, and PyTorch. Strong problem-solving skills with a passion for innovative, data-driven and AI-powered web solutions.

Technical Skills

Frontend Development

- Languages: HTML5, CSS3, JavaScript (ES6+)
- Frameworks/Libraries: Bootstrap
- UI/UX Tools: Responsive Design

Artificial Intelligence & Automation

- AI Platforms: Vapi (Voice AI)
- Workflow Automation: n8n
- Voice Technologies: Speech-to-Text, Text-to-Speech, Natural Language Processing

Education

THE EDUCATORS
Secondary Education **2018-2020 | Faisalabad, Pakistan**

Punjab Group of Colleges **2021-2023 | Faisalabad, Pakistan**
Higher Secondary Education

COMSATS University Islamabad **2023 – Present | Sahiwal, Pakistan**
Bachelor of Science in Computer Science

Projects

Mian & Sons Hardware Store (Ongoing)

- Full-Stack website | ReactJS, FastAPI, MongoDB
- Building an end-to-end digital system with admin panel and online storefront for a hardware business.
- Developed UI for inventory, sales, and customer management with real product data.
- Integrated secure authentication and real-time database connectivity via REST APIs.

VOICE APPOINTMENT BOOKING

- Developed AI-powered voice booking system using Vapi for natural language interaction and n8n for workflow automation
- Automated appointment scheduling with Google Calendar integration and email confirmations via Gmail API
- Built conversational interface enabling hands-free appointment booking through voice commands
- Designed scalable workflows in n8n to validate availability and trigger calendar events automatically

Hugging Face Multimodal App

- Created multimodal AI application using Hugging Face models for image analysis and text-to-speech functionality
- Integrated vision and language processing to analyze images, generate descriptive paragraphs, and provide voice output
- Built interactive interface with Stream lit for real-time AI-powered image Q&A and audio responses

Object Detection System

- Implemented real-time object detection using Hugging Face pre-trained models and computer vision techniques
- Developed camera-based detection system for identifying and classifying objects with Python
- Applied deep learning models for accurate object recognition and bounding box visualization

Restaurant Order System

- Built full-stack restaurant management application using Java and JDBC for database connectivity
- Designed order processing system with menu management, order tracking, and billing functionality
- Implemented database operations for efficient CRUD operations and transaction management

BITESPOT Food Ordering Website

- Created dynamic food ordering platform using PHP with MySQL database integration
- Implemented user authentication and session management for secure ordering
- Built restaurant menu system with cart functionality and order management features

Vehicle Monitoring System

- Built vehicle tracking and monitoring solution for fleet management
- Implemented real-time data processing for vehicle location and status updates
- Designed monitoring dashboard for tracking vehicle performance and analytics

Certifications

- NAVTTC Python AI
- NAVTTC Canva Designing
- NAVTTC Microsoft Excel
